

Coronavirus and COVID-19

WHAT IS COVID-19?

1. Covid-19 is a viral illness caused by the 2019 Novel Coronavirus that **effects the lungs and upper respiratory system.**
2. It is **not the cold or flu.** It is **more contagious and severe.**
3. It is spread through **close contact with another person**, including through **airborne droplets** caused by coughing and sneezing and by touching contaminated surfaces.
4. Covid-19 **can cause:**
 - Fever (100.4 degrees or above)
 - Coughing
 - Shortness of breath
5. In some cases, **it can be fatal**, especially for those:
 - age **65 and older**
 - with **heart, lung, and kidney disease;**
 - with **diabetes;**
 - with a **suppressed immune system.**
6. It can take **from 1-14 days** for a person to show any symptoms.

HOW DO I PROTECT MYSELF AND OTHERS?

1. **Avoid exposure:**
 - Stay away from people who have Covid-19, and large crowds of people.
 - When in public, **stay at least 6 feet away** from other people.
 - **Do not dine-in** at restaurants. Order take-out, delivery, drive-through, or curbside service.
 - **Do not attend** events with **10 or more** people.
 - **Do not travel.**
2. **Do not touch your face** with unwashed hands
 - Especially **avoid** touching your **eyes, nose, and mouth.**
3. **Wash your hands** often:
 - Use soap and water. **Lather for at least 20 seconds** before rinsing. Singing "Happy Birthday" twice takes about 20 seconds.
 - If there is no soap and water near, use at least a **60% alcohol-based hand sanitizer**, and rub your hands together until completely dry.
 - Wash your hands after you have been in public, or after touching high use objects like doorknobs, counters, tables, handrails, and cell phones.
4. **Disinfect your home:**
 - Disinfect high use objects like doorknobs, counters, tables, handrails and cell phones.
 - Use:
 - **Diluted bleach** solution (1/3 cup bleach per gallon of water, or 4 teaspoons per quart of water). **Do not** mix bleach with ammonia, any household cleaner, or any acidic solution (such as vinegar).
 - **Alcohol solutions** with 70% alcohol.
 - Or the **following products:**
<https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2>
5. Disinfect your cell phone often using a lint free cloth with 70% rubbing alcohol. Follow the manufacturer's guide for cleaning instructions.
 - **Do not** use bleach on your phone.

WHAT IF I MIGHT HAVE COVID-19?

- 1. Don't Panic!**
 - The **vast majority** of people **recover** within 14 days.
- 2. Get Screened:**
 - Arkansas Department of Health hotline:**
 - 1-800-803-7847 (Mon. – Fri., 8:30 am – 4:00 P.M.)
 - 1-800-554-5738 (weekends and after business hours)
 - Online UAMS screening** at: <https://uamshealth.com/healthnow/>
- 3. Stay Home:**
 - Only leave** your home **for medical care.**
 - Call** your medical provider **before visiting** and inform them you may have Covid-19.
 - Stay home** for **14 days.**
- 4. Separate** from other members of your household
 - Stay in a specific “sick room”
 - Use a separate bathroom, if possible
- 5. Stop Your Spread:**
 - Cover your cough** with a tissue or the bend of your elbow
 - Throw away any tissue you've coughed or sneezed into and wash your hands after.
 - Wear a **facemask only when** you are ill and leaving home to visit your medical provider
 - If **you cannot buy a facemask**, you can limit the droplets you spread by using a clean dishtowel, cotton blend t-shirt, or if short of breath 100% cotton t-shirt.
 - If the facemask **makes it hard to breath** stop use immediately.
- There is **currently no vaccine, treatment, or cure.**
 - Covid-19 is **viral, antibiotics will not work** to treat the illness.
 - Over the counter medications can **provide relief from symptoms** of Covid-19; however, consult with a **medical professional** before taking any.

WHY ARE THINGS SO DIFFERENT RIGHT NOW?

- The World Health Organization has declared Covid-19 a **pandemic.**
 - A pandemic is a disease that is spread on a world-wide level.
 - Pandemics threaten to overload healthcare systems, which creates a greater number of people needing treatment than our ability to provide it.
- Flattening the curve:**
 - The goal to is to **slow the spread** of Covid-19 so healthcare systems aren't overloaded
 - To achieve this** travel has been limited, schools have closed or moved online, people are working from home, and restaurants are no-longer dine-in.
 - These changes **will last until** the **threat** of a pandemic **has passed.**
- It is **normal to have questions** and to be **worried.**
